DETAILED ACTION

Response to Amendment

The amendment to the specification and the abstract filed on 26 June 2008 is sufficient to overcome the objection in the previous Office Action mailed 26 March 2008.

Allowable Subject Matter

Claims 1-10 are allowed.

The following is an examiner's statement of reasons for allowance:

With regard to claim 1, Nakai et al teaches an image reading device that can be used to detect forgery of banknotes, stamps, valuable securities etc. that uses two parallel spaced linear semiconductor arrays (FIG. 5a), wherein the first and second array are sensitive to a different spectrum range, however only one (array **100**) has at least three successive layers which are sensitive to light of different wavelengths (e.g., red, green, and blue). Furthermore applicant argues that by amending the claim to include the term "successive" the claim now eliminates the anticipation by Nakai since the separate layers are not stacked and thus not successive.

Stacked semiconductor arrays with different sensitivities is not unknown to one of ordinary skill in the art. Merrill US 5,965,875 and Bradski et al. US 2004/0125222 A1 are some examples of stacked semiconductor radiation detectors that have at least three successive layers which are maximally sensitive to light of different wavelengths.

It would be obvious to one of ordinary skill in the art at the time the invention was made to use a stacked radiation detector in the image reading device taught by Nakai as this would

Art Unit: 2884

negate the need for an additional linear array of infrared detectors since each pixel could be responsible for reading all spectrum thus increasing resolution. However an embodiment combining the stacked semiconductor detector of Merrill or Bradski into the reader taught by Nakai would subsequently not consist of *two* parallel spaced linear semiconductor detectors wherein the second linear semiconductor has a sensitivity spectrum range *different* from the first. The prior art of record does not teach or reasonably suggest making two parallel spaced semiconductor arrays with three successive layers, the second array having a filter which passes only a part of the spectrum, since this would be more easily achieved by having a simpler non-stacked array sensitive only to the range of spectrum desired, as is taught by Nakai.

With regard to claims 2-10, these claims are allowable by virtue of their dependence on claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments, see page 10 paragraphs 1-3, 5, and 7, filed 26 June 2008, with respect to claim 1 have been fully considered and are persuasive. The rejection of claims 1-10 has been withdrawn.
